

Emmanuel Adejoh

Full-Stack Software Engineer | React, Next.js, Node.js, Go

adejorion@gmail.com | +2349020151614 | Nigeria

github.com/emmyade360 | https://emmyade.vercel.app/

PROFILE

Full-stack software engineer building React/Next.js products, Node.js/Go services, database-backed APIs, and production safeguards. Ships end-to-end features and payment workflows; also builds AI workflows with validation, provider failover, prompt-injection controls, and cost-aware routing.

SELECTED PROJECTS

Trusta | Escrow payments | Sole engineer

Next.js, Prisma, PostgreSQL, Redis, Zod

- Designed the deal state machine, payment integration, authorization rules, and append-only event log for a safe-payment platform.
- Made money-moving actions resilient to duplicate requests and unreliable callbacks with idempotency, signed webhooks, provider rechecks, and scheduled reconciliation.

DoctorCare | Healthcare platform | Interface and data model

API integration, route-scoped data, validation

- Built patient-facing search, booking, consultation, and medical-record flows across doctors, patients, appointments, and records.
- Scoped records to the routes that need them and made scheduling and destructive actions explicit through validation and confirmation.

PROFESSIONAL EXPERIENCE

Software Engineer & Technical Mentor | Mercuryx

Oct 2025 to Present

- Own features from specification through implementation, review, and production release.
- Review junior engineers' work and document conventions used across the team.

Full Stack Developer | Vivaking Technologies

Mar 2025 to Nov 2025

- Built React interfaces and Node.js/MongoDB services, owning the API contracts between them.
- Profiled frequently used request paths and reduced the work performed on each request.

TECHNICAL SKILLS

Full-Stack Web: React, Next.js, TypeScript, JavaScript, Node.js, Go, REST APIs, Tailwind CSS, responsive design, accessibility

Backend and Data: PostgreSQL, MongoDB, Prisma, Redis, Supabase, Express.js, authentication, rate limiting, validation with Zod, API integration

AI Engineering: Vercel AI SDK, OpenAI, Anthropic Claude, Groq, Cerebras, Llama, prompt engineering, output validation, provider failover, prompt-injection defence, data redaction

Quality and Delivery: Docker, Vercel, Git, GitHub, Vitest, Jest, ESLint, logging, health checks, deployment workflows, environment-based configuration

TRAINING AND CERTIFICATION

Backend Engineering Programme in Go | Learn2Earn: Nov 2025 to Dec 2025; Practised Go concurrency patterns, HTTP service design, and predictable degradation under load.; Built and tested services using idiomatic Go patterns.

Certified Nomba Developer: Nomba x DevCareer; Issued July 1, 2026; Credential ID NMB-2026-XX6Z9S
